DUNDER KS

A Concentrated, Stabilised Liquid Potassium and Sulphur Fertiliser

- ✓ Includes yeast, complex sugars and crude protein to feed soil biology
- ✓ Contains liquid carbon (1.5% C) to increase CEC and soil potassium and sulphur storage
- ✓ Base levels of calcium, magnesium & a range of essential trace elements
- ✓ The dunder component is a by-product of the molasses fermentation, becoming a great food source for microbes
- ✓ This liquid sulphur and potassium formulation allows for quicker uptake by plants, as it is immediately available in the soil solution
- ✓ Enhanced application flexibility, allowing for precise nutrient delivery through irrigation systems for consistent crop growth

TYPICAL ANALYSIS

K	S	Ca	Mg	Carbon
31%	6.8%	0.25%	0.19%	1.5%

Includes trace elements of boron, manganese, copper, zinc, cobalt, molybdenum & selenium Typical analysis may vary due to natural ingredient included in this product.

Dunder KS is a liquid potassium fertilizer that enhances soil stability and improves the efficiency of potassium uptake. This product ensures that potassium is readily available for critical plant functions such as water regulation, enzyme activation, and carbohydrate synthesis and storage, making it an effective solution for boosting plant health and productivity.

APPLICATION RATES

Application rates of Dunder KS will be dependent on the specific crop, and the timing of application. Dunder KS is applied through drip & sprinkler systems. Please speak with Ag Plus Consultancy to determine the best soil application rate for your specific crop.
